SCHEDULE 1: THE PROJECT

Smart Mobility Platform for Sustainable Transport UoB

The proposed project is to design and develop a smart booking and account management platform tailored to the needs of the University of Bristol when arranging taxi and chauffeur services. Proline Taxi, a premium transport provider in Bristol and Bath, has been supporting academics, staff, and visitors with airport transfers and executive journeys for several years. While our services are trusted for their reliability and professionalism, the booking and administration process remains time-consuming both for us and for university departments.

Currently, reservations are managed via phone calls, emails, or manual systems, which require significant back-and-forth communication. Administrative staff must issue purchase order numbers, confirm details manually, and ensure compliance with internal procedures. This often leads to delays, inefficiencies, and unnecessary workload.

The goal of this project is to create a digital booking platform—both web-based and mobile—that makes the process simpler, faster, and more transparent for university staff.

Key features will include:

- Streamlined booking: staff can log in, enter pick-up and drop-off details, select vehicle type, and instantly receive a confirmation.
- Integrated purchase order management: automated collection and verification of PO numbers during booking, reducing the need for manual checks.
- Corporate account functionality: ability to manage multiple users under the same department or faculty, with centralised invoicing and reporting.
- Real-time tracking: drivers and vehicles visible in real-time, providing reassurance and clear communication.
- Sustainability options: prioritisation of hybrid and electric vehicles to support the university's environmental goals.
